Pharmaceutical compositions containing this ligand may be used as a pituitary function commodulator. This ligand could have specific applications as a control in the representation of prophylactic or therapeutic sgent for dementia, depression, hyperkinetic cs yndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, cc syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, cc trauma, growth hormone secretory disease, hyper- and polyphagla, cc hyperripidaemia, hypercholesterolaemia, hyperripyceridaemia, hypercholesterolaemia, hyperripyceridaemia, cc hyperrolactinaemia, diabetes, cancer, pancreatitis, renal disease, cc hyperripidaemia, brian ischemia, epilepsy, amyjotrophic dateral sclerosis, cacute myocardial infarction, infertillty, spinocerebellar degeneration, co bone fracture, trauma, atopic dermatitis, osteoporosis and/or coigogalactia. Assaya can also be developed to screen compounds which are cc apable of altering the binding activity of the ligand affecting cactivation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ğ

The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 1992 ligand or its derivative. The antibodles can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of projectin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in ciarifying the physiological functions of the ligand and its derivative sequences AAY49290-302 represent peptide fragments of the 1992 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarcan section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion

                                                                                                                                  The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor iigand. This can be used to control the secretion of CRH and is useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

                                                                                                                     RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a creative group (II) (e.g. succinimity) and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxy//thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth cfactors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases. AA890829 to AA892441 represent peptides which can be used in the crease of the person of the present invention.
                                                                                                                                                                                                                                                                                                                          Matches

CC ligand polypeptide corresponding to amino acid residues 34 to 54 of the CS sequence represented in AAW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein harmoceutical compositions containing this ligand may be used as a pituitary function CC modulator, a central nervous system modulator or a pancreatic function CC modulator. This ligand could have specific applications as a cc prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, cc trauma, growth hormone secretory disease, hyper-and polyphagia, cc hyperlipidaemia, hypercholesterolaemia, hyper-lyceridaemia, cc hyperrolactinaemia, diabetes, cancer, pancreatitis, renal disease, cc Turner's syndrome, neurosis, asthma, rheumatold arthritis, spinal injury, cc transient brain ischaemia, epilepsy, amylotrophic lateral scierosis, collegaiactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting cativation of the C protein-coupled receptor protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            as drugs

This can be used to control the secretion of CRH and is useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolmemia, secondary or chronic hypoadrenocorticism, Addison's disease (including borodom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC ligand binding to the g protein-coupled receptor protein. Pharmaceutical CC compositions containing this ligand may be used as a pituitary function CC modulator, a central nervous system modulator or a pancreatic function CC modulator. This ligand could have specific applications as a CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic CC syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper- and polyphagia, CC hyperlipideemia, hypercholesterolaemia, hypergiyceridaemia, renai disease, CC Turner's syndrome, neurosis, asthma, rheumarold arthritis, spinal injury, CC translent brain ischaemia, epiiepsy, amyiotrophic laterai sclerosis, CC translent brain ischaemia, epiiepsy, amyiotrophic laterai degeneration, CC acute myocardial infarction, infertiiity, spinocerebellar degeneration, CC consolation, translent kesays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
Physiologically-active polypeptide recognized as ligand by protein-coupled receptor protein, for promoting secretion.
                                                                                                                                                                                                                                                                                                 treatment; dlsease; pain; atonic bieeding; uterine caesarean section; artificial fertilization; galact

present
                                     The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G proteir receptor ligand. This can be used to control the secretion of CRH and is useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hyposdrenocorticism, Addison's hypercortisolaemia, secondary or chronic hyposdrenocorticism, Addison's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              which contains a ligand peptide or its salt for the G protein coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         as drugs

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ş
              compositions containing this ilgand may be used as a pituitary function compositions containing this ilgand may be used as a pituitary function modulator. First ilgand could have specific applications as a prophylactic or therspeutic agent for dementia, depression, hyperkinetic prophylactic or therspeutic agent for dementia, depression, hyperkinetic cyprophylactic or therspeutic agent for dementia, depression, hyperkinetic cyprophylactic or therspeutic agent for dementia, depression, hyperkinetic cyprophylactic or therspeutic agent for dementia, polyphagia, hypercholesterolaemia, hyperglyceridsemia, hypercholesterolaemia, hyperglyceridsemia, hypercholesterolaemia, hyperglyceridsemia, hyperglyceridsemia, hyperglyceridsemia, hyperglyceridsemia, cyprophylactinacim, diabetes, cancer, pancreatitis, renal disease, cyprophylactinacim, hypercholesterolaemia, hyperglyceridsemia, hyperglyceridsemia, composition, the curosis, sethma, rheumatoid arthritis, spinal injury, canute myocardisl inferction, infertility, spinocerebellar degeneration, content processes and/or collogisiscia. Assays can also be developed to screen compounds which are content on a fittering the binding activity of the ligand affecting activity of the ligand affecting activity of the ligand affecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SX
          CC The present sequence represents a human type ligand fragment. It
CC is used in the course of the invention. The specification describes
CC an agent for modulating prolactin secretion which comprises a
CC ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR)
CC protein. The agents for promoting prolactin secretion can be used for
CC tresting or preventing hypocovarianism, genecyst escogenesis, menopausal
CC syndrome, eurhyroid or hypometabolism. They can by used for promoting
CC inhibiting prolactin secretion can be used for treating or preventing
CC inhibiting prolactin secretion can be used for treating or preventing
CC pituitary adenomatosis, brain tumour, emmeniopsthy, autoimmune discase,
CC prolactinoms, infertility, impotence, amenorrhes, gsisctorrhea,
CC prolactions, infertility, impotence, amenorrhes, gsisctorrhea,
CC prolacting syndrome, lymphoma, Sheehan syndrome or dyszoospermia.
CC The inhibitory sgents can also be used so contraceptives. The sgents for
CC modulating placental function can be used for treating or preventing
CC choriocarcinoms, hydatid mode, irruption mole, abortion, unthrifty fetus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SX
OX
                                            This is the amino acid sequence of the human pituitary G
CC protein coupled receptor ligand 19P2L. A method suitable for
CC commercial high-level production of 19P2L comprises expressing
CC the ligand in host cells as a recombinant fusion protein e.g. with
CC human basic fibroblast growth factor (see AAV83796-97) that has
CC been modified to include an N-terminal cysteine residue. The
CC ligand is released from the fusion by cysnylation followed by
CC ammonolysis. 19P2L has prolectin secretion-stimulating and (at
CC high doses) prolactin secretion-inhibiting properties. It can be
CC used in the treatment and prevention of various diseases including:
CC senile dementia, cerebrovascular dementia, and dementia associated
CC with: geneslogical disorders (e.g. Alzheimer's disease, Parkinson's
CC disease, Pick's disease, Huntington's disease), infectious diseases
CC diseases (e.g. hypothyroidism, vitamin B12 deficiency, alcoholism,
CC intoxication by drugs, metal and organic compounds), tumourigenic
CC subarachnoidal heamorrhage, and other types of dementia, depression,
CC hyperactive child syndrome (microencephalopathy) and disturbance of
CC consciousness. It is also useful for prevention and treatment of
CC disease associated with projectice and autoimmune disease
CC (hypersecretion disorders), and sentinal vesicle hypothesiase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

submitted to the EMBL Data Library, September 1997
A; Description: The sequence of C. elegans cosmid K10r12.
A; Reference number: Z21157
A; Accession: T32376
A; Status: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Molecule type: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A; Nolecule type: DNA

Title: Perfect score: Sequence: US-09-446-543A-73\_COPY\_2\_21 103 1 PDINPAWYXXRGIRPVGREX 20

Run on:

Scoring table: BLOSUM62 Gapop 10.0 , Gapext 0.5

105224 seqs, 38719550 residues

Searched:

Total number of hits satisfying chosen parameters: 105224

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Oatabase : SwissProt\_40:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

**Opsins from the lateral eyes and ocelli of the horseshoe crab,
Llmulus polyphomus.";

Proc. Natl. Acad. Scl. U.S.A. 90:6150-6154(1993).

-!- FUNCTION: VISUAL PIGNENTS ARE THE LIGHT-ABSORBING NOLECULES THAT
MEDIATE VISION. THEY CONSIST OF AN APOPROTEIN, OPSIN, COVALENTLY
LINKED TO CIS-RETINAL.

-!- SUBCELLULAR LCCATION: Integral membrane protein.

-!- TISSUE SPECIFICITY: OCELLAR CELLS; NEOIAN OCELLI.

-!- PIN: SONE OR ALL OF THE CONSISTON TERMINAL SER OR THR RESIDUES MAY
BE PHOSPHOYLATED (BY SIMILARITY).

-!- MISCELLANEOUS: THIS OPSIN HAS AN ABSORPTION MAXIMUM AT 530 NM.

-!- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COOPLEO RECEPTORS.
